Special Systems

## Audio / Video

Multimedia and audio/video devices have become an integral part of people's everyday lives. Cesit Ingegneria S.P.A. designs and produces systems and infrastructures, for fixed installation, for corporate, guesting and entertainment applications and all organisations that use technology for their communication services.

**Audio and Video  
Distribution Systems**

---

**AV & IT Convergence**

---

**Architectural  
Acoustics**

---

We offer a comprehensive range of competencies, from acoustic studies and sound diffusion systems, to video projection, integrated system management and respective system integration and supervision. We have divided these applications into macro-areas, and identified their most appropriate characteristics and targeted solutions.

## Meeting Room

Our experience and vast knowledge of technologies enable us to translate our Customer's requirements into technologically advanced but easy to manage solutions. Our aim is to integrate advanced, high-tech audio, video, conferencing and multimedia solutions, while at the same time offering intuitive management interfaces for straightforward use even by non-technical personnel

## Retail

Shops, showrooms and shopping centres: we design and produce systems for the distribution of multimedia content and sound diffusion systems, with the possibility of interfacing and integration with fire detection systems and, if applicable, building automation systems

## Guesting & Entertainment

Multimedia systems must meet the needs of hospitality, entertainment, advertising, showbusiness, promotion, sport, and well-being in museums, hotels, theatres, restaurants, theme parks and beauty farms

## Education

Our aim is to develop and offer technologically advanced audio and video solutions designed to improve teaching processes, both for individual classrooms and for multi-purpose halls and specialist laboratories

## Digital Signage

In the dynamic advertising sector, Cesit Ingegneria offers complete projects for the management of contributions and content on remote displays, by finding the most appropriate solution for the various applications and markets, such as retail chains, shopping centres and any complex environment that needs to manage remote communications

To optimise the acoustics of an environment, you need to analyse it and get to know it. Cesit Ingegneria S.P.A. has considerable experience in architectural acoustics and is capable of making predictive calculations using the most advanced simulation software, and taking acoustic readings with state-of-the-art instrumentation.

- Predictive definition of acoustic parameters: reverberation time, clarity, speech transmission index, intelligibility, NC curves for small and large environments
- Acoustic treatment: diffusers, absorbers, bass-traps, QRDs
- Sound insulation

## System Integration

The audio/video systems designed by us can be integrated into building automation and home automation systems. We also offer customer instruction and equipment support services. As a system integrator, Cesit Ingegneria is therefore the first port of call for any organisation looking to increase, innovate and improve its technological and communication facilities and services.
